AGENDA

POLYMER RECYCLING & PROCESSING TECHNOLOGY

About The EXPO

Ongoing innovations in recycling technologies have made the plastic recycling process easier and more cost-effective. Such technologies include reliable detectors and sophisticated decision and recognition software that collectively enhance the productivity and accuracy of recycling of plastics.

Another significant innovation in plastic recycling has been in finding higher value applications for recycled polymers in closed-loop recycling processes. Due to notable improvements, recycling of non-bottle plastic packaging has become feasible.

Hence, we will showcase all the ongoing and latest technologies and machine information in this show biz aka EXPO. The innovations in the field of recycling of plastics will also be covered through our presentation sessions.

We will organize 2 keynote sessions and 5 other technical sessions during this EXPO.

So, let us join, exhibit and showcase what you have..!!
